

Number one choice

Our proven reputation in the commercial industry makes us the number one choice for property developers and housing associations that have a requirement to build sustainably. Our team is up to date with the requirements set out in Part G of the building regulations, WRAS guidelines, British Standard BS8515 along with other relevant legislation.

The Code for Sustainable Homes

Monsoon® by Stormsaver can help you to achieve Levels 4 upwards – whether you are a property developer or even if you are doing your own self-build project and are aiming for excellence in sustainability.

System specification

Monsoon® by Stormsaver has been designed specifically for use in family homes and can be installed individually or on housing developments. Each Monsoon® system is tailored to meet individual site-specific requirements.

Each system includes:

Monsoon® Storage tank with integral pre-tank filtration to remove leaves and debris, non return valve with rodent guard, floating suction extraction, calmed inlet, low level pump protection and access chamber with locking lid.

Monsoon® control panel with membrane pump, regulation compliant mains water top up, pressure diaphragm, and optional 0-100% tank level gauge.

You can either speak directly to our sales team who can provide a quote for you or get an immediate quote using our online 'get a quote' service at www.stormsaver.com

If you would like to speak to our technical team, please call us on 0844 884 0015 or email us at monsoon@stormsaver.com

Service and back-up

Monsoon® by Stormsaver is designed and manufactured to the highest standards and our customer service ensures that we deliver our promises. Our expert staff will look after you from the first time you call or browse our website, throughout the installation and through to post sales with our comprehensive after sales support.

All our customers receive easy to follow installation and maintenance instructions as well as access to our technical support hotline.

"The Monsoon® system finally makes rainwater harvesting a viable option for property developers. Stormsaver's experience and professionalism was clear throughout the project and the fact that the systems running costs are the lowest in the UK makes it ideal for families wanting to lower their household bills... making my properties easy to sell!"

Andy Parks – Action Pumps Ltd

"The Monsoon® system has been such a worthwhile investment and I cannot believe how simple the whole process was. We are reducing our water bill and have added value to our property as well as feeling like a much more sustainable family."

K. Smith – Stroud, Gloucestershire

systems

save water,
save money,
save the
environment

Welcome to Monsoon® by Stormsaver

Stormsaver is the UK market leader for low energy, money-saving and environmentally-sensitive rainwater harvesting systems.

We have spent many years perfecting the Monsoon® system which uses 90 per cent less energy than other domestic rainwater harvesting systems. It is robust, reliable and constructed with the highest quality materials.

No matter whether it's a single property or a larger development, a new build or a retro fit, Monsoon® from Stormsaver is quickly installed, easy to use and maintain.

What is rainwater harvesting?

Rainwater harvesting works by taking the rain from roofs and filtering out leaves and debris, before storing the water in the main storage tank. The water is then pumped into the property to be used for non-drinking applications such as flushing toilets, washing machines and garden watering.

Why do we need to harvest rainwater?

Mains water is an increasingly precious resource due to increases in demand from our ever-growing population. Rainwater harvesting can provide around 50 per cent of a family's water needs. This not only saves water, but also saves money and reduces our impact on the environment.

This is why more and more people are capturing their own rainwater – to make sure they have enough for their needs at a price they can afford.

Sell more properties

As people become ever more aware of the need to reduce their impact on the environment and to reuse or recycle wherever possible, it is inevitable that the green credentials of their homes will also become increasingly important.

Installing the Monsoon® system from Stormsaver as part of a new build project or refurbishment will only improve the property's attractiveness to environmentally aware buyers.

Why install Monsoon®?

■ **It's easy and simple.** Monsoon® is easy to install, simple to maintain and can reduce domestic water consumption by up to 50 per cent. The Monsoon® system has been developed by Stormsaver to provide the homeowner with a simple, yet effective automatic supply of harvested rainwater.

It's the lowest energy system on the market

Monsoon® uses a new range of technologically advanced membrane pumps which operate on a mere 90W. Other comparative systems waste 90 per cent of their energy operating pumps with power consumption of over 800W. This means energy consumption and running costs are 90 per cent lower than traditional pumping systems. So, the Monsoon® system costs less to operate, less to maintain and emits lower associated CO2. The control system containing the efficient 90W pump can be connected to solar, wind or mains power supply without the need for any complicated electrical controls.

Because the control unit is smaller than conventional systems, it is simple to install in a kitchen cupboard, utility room or garage.
